SUMMARY

Final-year B.Tech Cybersecurity Engineering student with SC-200: Microsoft Security Operations Analyst certification. Skilled in threat detection, incident response, and SIEM tools with hands-on expertise in Python and Java. Certified by Microsoft, EC-Council, and Cisco with practical experience in ethical hacking and forensics. Driven to secure digital environments and contribute immediately to any security operations team.

EDUCATION

MIT ADT University

June 2022 - June 2026

B.Tech Computer Science - 7.38

JJ College

May 2020 - May 2022

Higher Secondary Certificate (HSC) – Science - 82%

Colonel Parab's School (ICSE)

April 2012 - April 2020

Indian Certificate of Secondary Education (ICSE) - 72%

PROJECTS

SYN Flood DDOS/DOS Attack Script [🔗](#)

Developed a Python script using scapy to perform SYN flood attack, simulating DDOS/DOS conditions for network security testing.

IP Discover [🔗](#)

Port Scanner: A Python tool for thorough network port scanning, providing real-time feedback, detailed service detection, It utilizes the socket module to scann ports.

Port Scanner [🔗](#)

Port Scanner: A Python tool for thorough network port scanning, providing real-time feedback, detailed service detection, It utilizes the socket module to scann ports.

Logs-for-Splunk-SIEM-Practice [🔗](#)

Port Scanner: A Python tool for thorough network port scanning, providing real-time feedback, detailed service detection, It utilizes the socket module to scann ports.

Keylogger [🔗](#)

This Python keylogger script, utilizing pynput and smtplib libraries, records keyboard inputs, periodically sending them via email. Ensure responsible and ethical use. Prerequisites include pynput, smtplib, sched, time, and threading. Customize sender and receiver email addresses, replacing placeholders.

MAC OUI Finder [🔗](#)

This Python script helps you find the organization associated with a given MAC address by using the IEEE Organizationally Unique Identifier (OUI) database. The script will either read a list of MAC addresses from a file or from command-line arguments and then return the corresponding organization names for those addresses. It fetches the OUI data from the IEEE OUI standard file and utilizes the colorama library to print the results in different colors for easy distinction.

SKILLS

- Computer Networks. (CCNA)
- Intrusion Detection System - Snort.
- Intrusion Prevention System - Snort.
- Security Information and Event Management (SIEM) - Elastic Stack.
- Network Monitoring - Wireshark.
- Reconnaissance.
- Vulnerability Analysis - Nmap.
- Linux.
- Python.
- JavaScript - Node.js, Express.js.
- Database - MongoDB, MySQL.
- Java
